Alvogyl is a dry-socket treatment and post-extraction dressing which every dental office should have on hand. Alvogyl is a one-step, self-eliminating treatment which rapidly alleviates pain and provides a soothing effect throughout the healing process. It’s fibrous consistency allows for easy filling of the socket and good adherence during the entire healing process. The active ingredients of Alvogyl include eugenol for analgesic action, butamben for anaesthetic action, and iodoform for anti-microbial action.

**Description:**

Dry socket treatment.

**Features & Benefits**

- Effective anti-microbial action due to the presence of iodoform.
- Analgesic action due the soothing effect of eugenol on the alveolar tissues.
- Very easy to apply thanks to its fibrous consistency.
