

Detartrine , 45g

Indications

- Polishing after scaling and root planning.
- Polishing of fillings and dental surfaces.

Features & Benefits:

- Cariogenic bacteria such as streptococcus mutans are present on the tooth surfaces that form colonies on the teeth. These result in long term damage and decay of the tooth.
- Polishing with Silica based paste removes the bacteria, plus the bacteria can not re-appear for a long period of time because with Silica the surface of the tooth becomes extra smooth and polished where bacteria cannot form colonies.
- Mechanical abrasive action due to the presence of silica.
- Pleasant taste and feeling of freshness thanks to the essential oils.
- Available in 2 grit sizes: fine and coarse to meet all clinical needs.

Directions For Use:

Using a spatula, place a sufficient quantity of DETARTRINE on the Circular brush, and proceed in the usual manner.
