

PULPOTEC®

PROPERTIES

Pulpotec® is a medicament for long term treatment of pulpitis, by pulpotomy, of vital teeth, both permanent and deciduous. This treatment is both simple and rapid.

INDICATIONS

- > Pulpitis on permanent vital molars
- > Pulpitis on deciduous molars
- > Pulpitis on immature but permanent vital molars, enabling a complete radicular restoration of the tooth
- > Infected deciduous molars in pedodontics (the only **exception** to the rule of a treatment on vital teeth)
- > Treatment of molars suffering calcified root-canal to bring complete clinical recovery of the tooth

COMPOSITION

Powder: Polyoxymethylene, Iodoform, excipient
Liquid: Dexamethasone Acetate, Formaldehyde, Phenol, Guaiacol, excipient

- ◆ Radiopaque and non resorbable preparation for the treatment of pulpitis by pulpotomy of **vital** teeth

REF

Portion : 15 g powder
and 15 ml liquid

PULPOTEC®

A treatment with PULPOTEC® is simple, quick and efficient. Thanks to PULPOTEC® the technique of pulpotomy is optimized with minimum discomfort for the patient

Pulpotomy, an alternative to pulpectomy?

	PULPOTOMY	PULPECTOMY
Simplicity	A sensible choice	A risky choice
	No risk of root canal infection	Risk of root canal infection
	Keep the barrier of the vital radicular pulp	Risk of untight obturation
Reliability	Safety at the apical level	Risk of protrusion of dental material
	Minimize the iatrogenic risks (breaking of instrument, perforation, apical protrusion, etc.)	Surgical risks (breaking of instrument, perforation, apical protrusion, etc.)
	Ensure the possibility of a subsequent treatment by pulpectomy in case of failure	Tough post-and re-treatment
	Rate of success over 80%	Disputed rate of success

A treatment with PULPOTEC® is simple, quick and efficient

- Pulpitis in vital teeth can be treated by pulpotomy with no waste of time
- Traditional operating techniques without the risk of extrusion through the apex
- No costly or sophisticated equipment
- One or two sessions required to treat vital teeth
- Minimum discomfort for the patient
- **Complete radicular restoration of immature teeth**

A LONG-LASTING TREATMENT WHICH PRESERVES THE TISSULAR STRUCTURE OF THE TOOTH

Treatment with Pulpotec®, after vital pulpotomy, of a traumatized immature tooth.

1. Immediately after the treatment

2. After one year, highlighting complete apexification
