

Topical Paste 30ml

Paste for the local anaesthesia of the oral mucous tissues

PROPERTIES

Thanks to its composition, Topical paste possesses two distinct activities:

- Local anaesthesia due to the Benzocaine, active ingredient pertaining to the group of the aminoesters.
- Antisepsis due to Benzalkonium Chloride, pertaining to the family of quaternary ammonium with bactericidal activity.
- Acting time 1 Minute

INDICATION

- Local anaesthesia of gum before injection
- Superficial analgesia of gums before extraction of deciduous teeth
- Local anaesthesia of the oral mucous tissues before deep scaling or other care (lancing of abscess ...)

COMPOSITION

Benzocaine 20%, Benzalkonium Chloride 0,1%, food flavouring, excipient ad 100%

DIRECTIONS FOR USE:

- Dry the place prior to application
- Apply a small quantity of gel using a cotton pellet or an appropriate instrument
- Ask the patient to rinse the mouth to eliminate a possible excess from the product
- Wait one minute prior to the treatment
